PROFESSIONAL SUMMARY

Java Full Stack Developer with 4.2 years of experience developing enterprise banking, fintech, and business applications using Java, Spring Boot, Microservices, and REST APIs. Experienced in building secure backend services, integrating React.js and Angular frontends, and optimizing application performance using Kafka, Redis, and SQL databases. Hands-on experience with Spring Security, JWT, Docker, AWS, CI/CD, and Agile/Scrum development. Skilled in API development, transaction management, debugging, production support, and unit testing.

TECHNICAL SKILLS

Backend: Java 8+, Spring Boot, Spring MVC, Spring Security, REST APIs, Microservices, JWT, OAuth2, JPA, Hibernate, Maven, Stream API, Design Patterns
Frontend: React.js, Angular , JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap
Cloud/DevOps: AWS (EC2, ECS, S3, Lambda, RDS, CloudWatch), Docker, Kubernetes, Jenkins, Git, GitHub, Bitbucket, CI/CD
Databases: Oracle, PostgreSQL, MySQL, MongoDB, Redis
Messaging Systems: Apache Kafka, ActiveMQ, Event-Driven Architecture
Tools & Monitoring: JIRA, Postman, Swagger/OpenAPI, IntelliJ IDEA, Eclipse, VS Code
Testing: JUnit, Mockito
AI Tools: GitHub Copilot, ChatGPT/Claude (Code Generation & Debugging), Prompt Engineering

PROFESSIONAL EXPERIENCE

SCAN-IT SOLUTION (INDIA) Pvt. Ltd. 03/2026 – 08/2026 | Pune, MH (India)
Associate Software Engineer

- Developed backend services using Java, Spring Boot, Microservices, and REST APIs to support enterprise application workflows.
- Integrated React.js and Angular frontends with Spring Boot APIs and built reusable UI components.
- Improved data-access efficiency by implementing Redis caching and optimizing SQL queries.
- Integrated MySQL, PostgreSQL, and Oracle databases to support application data and business operations.
- Containerized applications with Docker and supported AWS deployments, storage, and monitoring using EC2, S3, and CloudWatch.
- Supported API testing, debugging, unit testing, and release activities using Maven, Bitbucket, Jira, Postman, and AI-assisted development tools.

CODENEON SOLUTIONS PRIVATE LIMITED 03/2023 – 03/2026 | Pune, MH (India)
Java Full Stack Developer

- Developed enterprise applications using Java, Spring Boot, Angular, and REST APIs, implementing reusable standalone components and reactive state management.
- Designed and optimized REST APIs to improve frontend-backend integration and data retrieval efficiency.
- Implemented application validations, resolved defects, and improved code quality in collaboration with development, QA, and support teams.
- Managed Jira tickets, sprint planning, and defect resolution to support timely Agile delivery.
- Deployed and maintained containerized Spring Boot microservices on AWS EC2, using S3 for storage and CloudWatch for application monitoring.
- Accelerated API development, debugging, and code reviews using GitHub Copilot and ChatGPT.

Decrypt0 , *Full Stack Web Developer* 06/2022 – 03/2023 | Pune, MH (India)

- Developed responsive web applications using React.js, JavaScript, Java, HTML5, CSS3, and Tailwind CSS.
- Integrated REST APIs and backend services to support end-to-end application workflows.
- Built reusable frontend components to improve maintainability and consistency.
- Collaborated with cross-functional teams to deliver production-ready features using Agile practices.

PROJECTS

Phoenix Full Container Load (FCL) / Trucking

- Developed an FCL rate administration service using Java, Spring Boot, REST APIs, React.js, and MySQL, enabling streamlined container-rate management workflows.
- Engineered modular backend components for carrier, trade, commodity, and trade-lane management using a layered architecture.
- Built carrier management APIs supporting record creation, retrieval, updates, status management, and flexible search and filtering.
- Improved data-access efficiency by implementing Redis caching for frequently accessed reference data and optimizing MySQL queries and indexes.
- Strengthened existing Trucking functionality by resolving defects, enhancing APIs and validations, and optimizing database queries while preserving existing workflows.
- Implemented role-based access control (RBAC), request validation, centralized exception handling, and standardized API responses to improve security, consistency, and maintainability.
- Streamlined development and troubleshooting using AI coding assistants for carrier search APIs and Redis caching, alongside Git, Maven, Jira, Postman, Docker, and AWS for development and delivery activities.

Banking Transaction Processing System

- Engineered transaction-driven banking services for account management and transaction processing using Java and Spring Boot, reducing transaction failures by 25%.
- Developed reusable UI components using Angular 19 standalone components, simplifying frontend architecture and component management.
- Built banking interfaces using Angular reactive forms, validation, routing, and REST API integration for account and transaction workflows.
- Secured REST APIs using JWT authentication and role-based access control (RBAC) to protect sensitive financial data.
- Implemented Spring @Transactional management and rollback handling to maintain data consistency and transaction integrity.
- Integrated Apache Kafka for asynchronous event processing and transaction notifications, increasing system throughput by 40% and improving fault tolerance.
- Optimized API performance using Redis caching for frequently accessed data, reducing API latency by 35%.
- Optimized SQL queries and database indexing to improve query efficiency and support high-concurrency transaction workloads.
- Containerized and deployed backend services using Docker and AWS EC2, leveraging Amazon RDS for database management and S3 for log and artifact storage.
- Resolved production issues through root cause analysis, AWS CloudWatch monitoring, and cross-functional collaboration, improving application stability and functionality.
- Accelerated Kafka troubleshooting and transaction-logic optimization using AI-assisted debugging tools.

ESG Data Analytics Platform

• Developed a cloud-ready ESG data platform using Java, Spring Boot, PostgreSQL, Apache Kafka, Docker, and REST APIs.
• Implemented Kafka-based event processing for data ingestion, audit logging, and asynchronous workflows.
• Configured Azure DevOps pipelines for continuous integration, automated testing, and deployment validation.

EDUCATION

Bachelor of Engineering, *Sinhgad Institute of Technology* 05/2022 | Lonavala, MH (IN)

SOFT SKILLS

- Problem-Solving
- Analytical Thinking
- Adaptability
- Teamwork
- Communication
